## Productivity Innovation Manager

### Spark a warehouse productivity revolution

As the demand for warehouse productivity continues to rise, it is essential to find new and innovative ways to increase efficiency. The traditional approaches of hiring more staff or waiting for robotics to become

more accessible are no longer viable solutions. There is an urgent need to do more, much more, with the current staff, starting today.

The Productivity Innovation Manager is aware of the strain on

the warehouse, that old technology will not suffice. There needs to be innovation and effective tools. The answer must come from logistics and data. You can ignite the revolution in warehouse productivity.

### Three challenges that must be met

There are three wide-ranging challenges to achieving significant gains in warehouse productivity:

1. **Improving efficiency.** Errors on the shop floor. Worker travel time. Bottlenecks. There is ample opportunity to improve the efficiency of layout, processes, and operations, but the current tools fall short.
2. **Finding innovation.** The challenges cited here are not unique. They are common to most all warehouses. It is likely that the innovation that can successfully address these challenges comes from a upstart, a disruptor, and they are unlikely to be widely known.
3. **Optimization through data is an enormous opportunity.** However, the WMS is mission critical and there simply is no appetite, or priority, to ask it to do new things. The information we get today is the information we're going to get tomorrow.

## New technology for new problems: ProGlove Solution Cases

We believe in the power of the human workers and that they are the nexus of future improvements in warehouse efficiency, accuracy, and speed. Our innovation and development of smarter hardware and software has shown us that there are six distinct solution cases.

Each solution case is a proven path to success - to significant increases in productivity today, and a future where new, previously unavailable data from the shop floor leads Innovation Managers to optimize every aspect of the warehouse environment.

This visual depicts our six solution cases. There are two sets of solution cases - those focused on human worker performance and experience and those focused on scanner device performance.

Here are the three Solution Cases that may most benefit Productivity Innovation Managers now

Here's the proof that these new tools work

ProGlove customers report:

**6 seconds**

saved with each scan

**33%**

error reduction

**20%**

increase in productivity

But don't take their word for it. Prove it yourself.

Take the ProGlove Challenge. 30 minutes, in your warehouse, our scanners against yours. Click [here](#) to set it up.

We'll put you in touch with one of our experts, and schedule a meeting.

**GXO**

"We're constantly exploring new technology that enhances the accuracy, efficiency, and safety of our operations. Where we deploy wearable scanners, we can increase productivity ..., while delivering a better experience for our employees."

**RICHARD CAWSTON**

President - Europe, GXO
