Stay informed about critical devices

INSIGHT Visibility

Manage your devices remotely across locations while monitoring their functionality across your organization. Stay informed about critical device data wherever you are.

One place to remotely manage devices

No need to manually apply firmware updates or configurations, just push a button.

Improve the performance of your ProGlove scanners, Gateways, & Mobile devices using our remote device management.

Deep dive into a single station or multiple locations by creating a digital representation of your organization with all sites and locations.

Set up your individual hierarchy with as many levels and connected devices per level as required and apply your desired configuration to groups of devices.

Monitor your device usage

No more looking for a needle in a haystack. See all that metadata in one place such as; serial number, connections, battery information, app configurations, firmware version and more.

Monitor your devices and their battery charging status by tracking ProGlove assets across sites, use cases or stations.

You can even enhance your existing IT system with our device data points via API to improve the quality and efficiency of your device operations.

Free with every ProGlove wearable scanner

INSIGHT Standard

- Create your INSIGHT account & begin integrating ProGlove devices
- Manually configure Scanners, Gateways, Mobile applications
- Deploy with the latest downloads

Upgrade for more advanced features!

INSIGHT Visibility

- **Manage** devices remotely across multiple locations
