

PROGLOVE

Our Story

Digitec Galaxus, part of the Migros Group, is Switzerland's largest and fastest-growing e-commerce platform. With consistent double-digit growth, the company needed to make sure its logistics operations could keep pace. The partnership began in 2019 in Digitec Galaxus's main logistics center in Wohlen, and since then ProGlove has become a trusted partner across several warehouses.

in cooperation with  **GALAXUS**

Challenges

Rapid expansion created pressure on warehouse efficiency and employee comfort.

- Workers depended on pistol scanners that slowed down picking workflows
- Physical strain affected ergonomics and productivity
- Seasonal peaks required quick onboarding of large numbers of temporary staff

Solutions

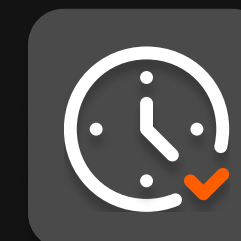

Digitec Galaxus has modernized its operations by replacing traditional handheld scanners with the ProGlove MARK 2. This hands-free solution streamlines workflows, enhances operator comfort, and is now fully integrated across inbound, outbound, and picking processes. To further increase efficiency and ensure scalability, Digitec expanded its deployment with additional ProGlove technologies:

- Reels enabling ergonomic and flexible scanning across multiple angles
- Gateway Plus ensuring reliable and high-performance 5 GHz Wi-Fi connectivity
- More than 350 devices deployed to support business growth and peak demand

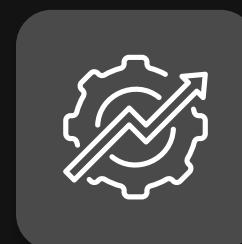

Results

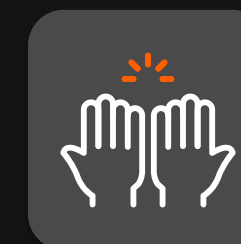

20% fewer errors in the picking process

About 5 seconds saved per scan

Up to 15% increase in overall performance

Improved ergonomics with hands-free scanning

"The ProGlove solution allows us to scale faster while keeping efficiency and ergonomics high. It has become an essential part of our warehouse operations."
